R19 follow-up: identical observations and weights; standard static aggregation controls
Positive favors output averaging. Whole-network nonlinear order effect; not FST-only or real-video superiority.
rho=0, JPEG=False
rho=0, JPEG=True
rho=0.9, JPEG=False
rho=0.9, JPEG=True
Post-average minus pre-average PSNR (dB)
Clip each output, then average
Average raw outputs, then clip
